# Ajay Gaur

Denver, Colorado, United States | iamajaygaurx@gmail.com | (303) 437-9446 | github.com/iamajaygaur | linkedin.com/in/iamajaygaur

## PROFESSIONAL SUMMARY

Software Engineer and M.S. Computer Science student at CU Denver with experience in Python development, automation, statistical algorithms, and CI/CD practices. Skilled in building modular applications, implementing test-driven development with 90%+ unit test coverage, and collaborating in Agile environments. Strong foundation in software design, version control, and cloud-native development, with a focus on delivering scalable and reliable solutions.

## EDUCATION

**University of Colorado Denver** Aug 2025 - May 2027
Master of Science, *Computer Science* GPA: 3.45

**RMD Sinhgad School of Engineering** Jun 2020 - Jul 2023
Bachelor of Engineering, *Computer Engineering* GPA: 8.8/10

## SKILLS

**Programming Languages:** Python, R, Java, C/C++, JavaScript, Bash, SQL

**Frameworks & Libraries:** Django, Spring Boot, React, NumPy, Pandas

**Databases:** PostgreSQL, MySQL, MongoDB

**Tools & Software:** Git, GitHub, Visual Studio

**DevOps & Cloud Infrastructure:** AWS, EC2, S3, ECS/Fargate, EKS, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, Continuous Integration

**Soft Skills:** Agile

## WORK EXPERIENCE

**CU Denver – College of Engineering, Design, and Computing |** Graduate Reserach Assistant | Denver, Colorado May 2026 -

- Built a full-stack equipment rental application for the Dean's Office enabling staff and students to request equipment, track inventory in real time, and route requests through an automated admin approval workflow with email notifications and am now leading development of a judging platform for the Senior Design Capstone Expo to support project scoring, submission tracking, and smooth Expo-day operations.
- Building data analysis and reporting capabilities across both platforms, giving the Dean's office clear visibility into rental demand, judging outcomes, and process bottlenecks to support data-driven decisions.

**CU Denver – College of Engineering, Design, and Computing |** Student Assistant II Oct 2025 - Present

- Architected automation scripts and maintained departmental computing infrastructure for 10+ faculty research labs, boosting operational efficiency by 25% using Python and DevOps practices.
- Collaborated with engineering faculty to deliver 5+ research-oriented software projects, producing technical documentation that reduced project onboarding time by 30%.

**Concentrix |** Technical IT Support Engineer Feb 2025 - Jul 2025

- Programmed Python and Bash/PowerShell automation scripts supporting 10,000+ enterprise users, facilitating status updates to management and curtailing incident resolution time by 60% while enhancing SLA adherence.
- Validated deployment scripts through iterative testing and QA principles, facilitating technical reviews with stakeholders and diminishing manual intervention by 70% across 15+ production rollouts.

**Thinking Hut IT Solutions |** DevOps Trainee Sep 2023 - Oct 2024

- Built and administered CI/CD pipelines (Jenkins, GitHub Actions) with full test integration, presenting validation reports to stakeholders; implemented regression and integration tests, articulating results to engineering leads and cutting environment errors by 25%.

- Optimized infrastructure by authoring modular Ansible playbooks and Terraform configurations, collaborating with engineering teams to articulate deployment strategies and slash server provisioning time from hours to minutes for 50+ deployments.
- Verified infrastructure automation correctness by maintaining version histories and simulation environments, achieving 99% accuracy in 20+ complex system deployments.

**Elite Softwares |** Django Developer Intern Apr 2023 - Sep 2023

- Programmed 12+ Python Django web application features using MVC architecture, mitigating system bugs by 40% through systematic version-controlled debugging workflows.
- Generated 8+ modular Python software components using Visual Studio and Git, presenting design documentation to team leads and advancing code maintainability by 20% through collaborative development workflows.

## PROJECTS

**Scalable Node.js App on AWS ECS/Fargate**

- Architected containerized deployment with Terraform, slashing infrastructure provisioning time by 40% and implementing automated CI/CD via GitHub Actions to accelerate release cycles.

**Healthcare Application CI/CD Deployment**

- Designed end-to-end CI/CD pipeline with automated testing and real-time monitoring; enforced correctness through Prometheus/Grafana alerting and simulation-based validation.

**Containerized Zomato Clone (Microservices)**

- Automated CI/CD pipelines by embedding SonarQube and OWASP dependency scanning, collaborating with stakeholders to curtail security vulnerabilities by 25% and presenting improved code quality standards.

**Waste Management System using IOT**

- Constructed an IoT-enabled Waste Management System with real-time monitoring and automated disposal alerts, mitigating overflow and supporting smart city initiatives with a scalable, 20% operational cost-reduction solution.

**3D Modeling of X-Ray Images using Virtual Reality**

- Constructed a 3D model of knee bones from X-rays using Canny edge detection and integrated VR technology, augmenting bone implantation accuracy and refining diagnostic precision over CT scans.

## CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Azure Fundamentals - AZ900 - Microsoft
- AWS - Cloud Foundation - AWS
- NDG - Linux Essentials and Unhatched - NDG
- CPA: Programming Essentials in C++ - Unknown
- PCPA: Programming Essentials in Python - Unknown
- IIT Bombay Spoken - Java, CPP, C, and Python - IIT Bombay
